Amidst a mixed hackathons function in a city, a new hackathon, directed during bringing out solutions in a medical space, generally in an area of maternal and childcare has been launched in a city. Called Jugaad-a-thon, this hackathon brought together 250 clinicians, engineers and entrepreneurs for anticipating solutions to residence mom and child caring hurdles in India. After dual days of work by participants, 34 intensity solutions were presented, that ranged from new collection for antenatal caring to disruptive technologies for baby asphyxia.

Some solutions enclosed a mobile app for early diagnosis of developmental delays in children, affordable wearable device that reminds profound women about pivotal milestones in pregnancy when they need to see medical professionals.

According to Vikram Damodaran, director, medical innovation, India, and GE Healthcare South Asia, a hackathon is a totally new experience, and “we trust co-creation of solutions can accelerate affordable medical innovation. We wish to do some-more jugaad-a-thons to foster creation and co-creation in a medical industry.”

“We are focused on anticipating impactful and innovative ways to yield caring to women and children here,” pronounced Elizabeth Bailey, executive of a Consortium for Affordable Medical technologies (CAMTech) during Massachusetts General Hospital's Center for Global Health, that is participating in a hackathon.

In some of the other hackathons organized by CAMTech opposite the US, Uganda and India, over 1,000 innovators have participated in a past, formulating a far-reaching operation of new technologies to residence problems like baby asphyxia, postpartum haemorrhage, cervical cancer among others.

According to Soura Bhattacharyya, arch of Medtech during Glocal Healthcare, hackathons assistance turn partial of a singular village of innovators, and is executive to improving a lives of millions.
